| <b>Introduction</b> .....  | 1 |
| CCSS Standards for Mathematical Practice .....                             | 5 |
| Aligning Chapters to the Common Core State Standards for Mathematics ..... | 5 |
| 2015 Jump\$tart Standards for Personal Finance Education .....             | 6 |
| Aligning Chapters to the Jump\$tart Financial Literacy Standards .....     | 7 |

## PART 1

|                                    |   |
|------------------------------------|---|
| <b>Algebra and Functions</b> ..... | 9 |
|------------------------------------|---|

### Chapter 1

|  |    |
|--|----|
| <b>Your Best Interest: Finding the Right Place to Save Money</b> ..... | 11 |
|--|----|

Students explore how banks set up savings accounts, discovering that some types of accounts may not be good for making money and in fact may result in *losing* money.

### Chapter 2

|   |    |
|---|----|
| <b>Grow Me the Money! Evaluating Investment Options</b> ..... | 33 |
|---|----|

Students use explicit and recursive formulas to explore how principal, interest rate, and investment length affect how money grows.

### Chapter 3

|  |    |
|--|----|
| <b>Fast Cash: Pawnshops and Payday Loans</b> ..... | 53 |
|--|----|

Examining the pros and cons of short-term loans, students explore case studies of pawnshop and payday loans as they write expressions and illustrate linear and exponential growth.

## PART 2

|                       |    |
|-----------------------|----|
| <b>Modeling</b> ..... | 69 |
|-----------------------|----|

### Chapter 4

|   |    |
|---|----|
| <b>Know the Score: Measuring and Reporting Creditworthiness</b> ..... | 71 |
|---|----|

Students explore the mathematical model used to determine a FICO credit score, and they analyze what can have negative and positive impacts on credit scores.

## Chapter 5

### Unraveling the Mystery of Credit Card Payments ..... 91

In a series of activities, students consider models for credit card debt, as they learn how credit card interest rates and fees can affect the true cost of items they have purchased.

## Chapter 6

### Learning to Appreciate Depreciation..... 113

Students use scatterplots, linear regression, and nonlinear regression to compare buying new or used cars and buying versus leasing a car.

## PART 3

### Data Analysis and Statistics..... 137

## Chapter 7

### Investigating Investments: Which Is Better? ..... 139

Students explore and compare rates of return on different types of investments—stocks, bonds, mutual funds, and CDs—using plots on the real number line and statistics.

## Chapter 8

### Wall Street Apples: Following Stock Values over Time..... 163

By evaluating Apple stock, students describe how stock values change over time and consider moving averages as a technique to reduce variability and make predictions.

## Chapter 9

### To Educate or Not to Educate: Is Postsecondary Education Worth It? ..... 183

Students consider both education costs and lifetime earning potential as they weigh the costs and benefits of continuing their education.

## Chapter 10

### Risky Business: Insurance and Probability..... 203

Students explore probability distributions associated with insurance claims and financial losses, and they relate expected values to insurance premiums.

## Appendix

### Financial Literacy Resources ..... 225
