

CONTENTS

Introduction	vii
---------------------------	-----

Chapter 1

Discovering rules for odds and evens.....	1
Case 1: Number of the day	2
Case 2: Reds are even; blacks are odd	5
Case 3: Why can't you count to 5 by 2s?	7
Case 4: Adding evens	11
Case 5: Defining even numbers	15

Chapter 2

Finding relationships in addition and subtraction.....	21
Case 6: Double compare	22
Case 7: Adding 1 to an addend	24
Case 8: Was it something I said?.....	29
Case 9: Is it two more or two less?.....	34
Case 10: $37 + 16 = 40 + x$	37

Chapter 3

Reordering terms and factors	41
Case 11: Does order matter when counting?.....	43
Case 12: Does order matter when adding?.....	45
Case 13: The “switch-around” rule	51
Case 14: “Switch-arounds” for multiplication.....	56

Chapter 4

Expanding the number system.....	61
Case 15: Is 0 really a number?	63
Case 16: 12 cats and 0 dogs.....	65
Case 17: Multiplying by 0	68
Case 18: It has basements.....	70
Case 19: Does the order rule still hold?	75

Chapter 5

Doing and undoing, staying the same.....	77
Case 20: One situation, two equations, Part 1	79
Case 21: One situation, two equations, Part 2.....	81
Case 22: Finding a missing change.....	83
Case 23: Is 1 acting just like 0? Part 1	87

Case 24: Is 1 acting just like 0? Part 2	91
Case 25: Thinking about negative numbers.....	96
Chapter 6	
Multiplying in clumps.....	103
Case 26: Bunches of flowers	105
Case 27: Arrays.....	109
Case 28: Exploring the distributive property	112
Case 29: Picturing the distributive property	116
Case 30: Multiplying negative numbers.....	123
Chapter 7	
Exploring rules for factors	127
Case 31: Factors of factors, Part 1	128
Case 32: Factors of factors, Part 2.....	135
Case 33: Factors of hundreds numbers	138
Case 34: Products of factors.....	144
Chapter 8	
Highlights of related research	147
