

# Preface

The Putting Essential Understanding into Practice Series explores the teaching of mathematics topics in K–grade 12 that are difficult to learn and to teach. Each volume in this series focuses on specific content from one volume in NCTM’s Essential Understanding Series and links it to ways in which those ideas can be taught successfully in the classroom.

Thus, this series builds on the earlier series, which aimed to present the mathematics that teachers need to know and understand well to teach challenging topics successfully to their students. Each of the earlier books identified and examined the big ideas related to the topic, as well as the “essential understandings”—the associated smaller, and often more concrete, concepts that compose each big idea.

Taking the next step, the Putting Essential Understanding into Practice Series shifts the focus to the specialized pedagogical knowledge that teachers need to teach those big ideas and essential understandings effectively in their classrooms. The Introduction to each volume details the nature of the complex, substantive knowledge that is the focus of these books—*pedagogical content knowledge*. For the topics explored in these books, this knowledge is both student centered and focused on teaching mathematics through problem solving.

Each book then puts big ideas and essential understandings related to the topic under a high-powered teaching lens, showing in fine detail how they might be presented, developed, and assessed in the classroom. Specific tasks, classroom vignettes, and samples of student work serve to illustrate possible ways of introducing students to the ideas in ways that will enable students not only to make sense of them now but also to build on them in the future. Items for readers’ reflection appear throughout and offer teachers additional opportunities for professional development.

The final chapter of each book looks at earlier and later instruction on the topic. A look back highlights effective teaching that lays the earlier foundations that students are expected to bring to the current grades, where they solidify and build on previous learning. A look ahead reveals how high-quality teaching can expand students’ understanding when they move to more advanced levels.

Each volume in the Putting Essential Understanding into Practice Series also includes three appendixes to extend and enrich readers’ experiences and possibilities for using the book. The appendixes list the big ideas and essential understandings related to the topic, detail resources for teachers, and present tasks discussed in the book. These materials are also available to readers online at the More4U website, where Appendix 3 includes materials and templates to facilitate hands-on

work with students. Readers can gain online access to each book's More4U materials by going to [www.nctm.org/more4u](http://www.nctm.org/more4u) and entering the code that appears on the title page. They can then print out these materials for personal or classroom use.

Because the topics chosen for both the earlier Essential Understanding Series and this successor series represent areas of mathematics that are widely regarded as challenging to teach and to learn, we believe that these books fill a tangible need for teachers. We hope that as you move through the tasks and consider the associated classroom implementations, you will find a variety of ideas to support your teaching and your students' learning.

## Acknowledgments

The author extends thanks to the following teachers, students, and schools for providing students' samples for the activities in this book:

- Dana Anderson's prekindergarten class in Yeager Elementary School, Cy-Fair Independent School District, Houston, Texas
- Jennifer Broadwell, Sue Peterson, Tina Bradley, Tracy Bass, and Tracie Wolfis's first grade students from Oehrli Elementary School in Montague, Michigan
- Trisha Hall's second grade students from Lincoln Park Elementary, Mona Shores School District, Norton Shores, Michigan
- Sara Freeman Morris and Elsie Contreras's prekindergarten students in Panda Path Early Learning in Spring Branch ISD, in Houston, Texas
- Students and teachers from ten Head Start sites in Houston, Texas
- Ann Franzosa's kindergarten students in Hazle Township Early Learning Center, Hazleton Area School District, Hazle Township, Pennsylvania
- Four amazing grandsons (in prekindergarten, kindergarten, first grade, and second grade), who attended Meme's Summer School in Muskegon, Michigan
- All the teachers who have provided students' work over the past twenty years!

Special thanks go to the writing team of Project M<sup>2</sup>, funded by the National Science Foundation under Grant No. 0733189 developed at the University of Connecticut and published by Kendall Hunt. The author was privileged to work as a member of the writing team with four outstanding colleagues: M. Katherine Gavin, Tutita M. Casa, Suzanne H. Chapin, and Linda J. Sheffield. Although none of the student samples in this book came from the grant, the ideas that the team crafted certainly influenced the activities included in the book.
