## Volumes 1 and 2, 1970-71

### Author Index

- Aichele, D. B. Does a terminal mathematics course contribute to changes in attitudes toward mathematics? 2: 197-205, May 1971.
- Aiken, L. R., Jr. Affective factors in mathematics learning: Comments on a paper by Neale and a plan for research. 1: 251-55, Nov. 1970.
- Aiken, L. R., Jr. Verbal factors and mathematics learning: A review of research. 2: 304-13, Nov. 1971.
- Alspaugh, J. W. The relationship of grade placement to programming aptitude and FORTRAN programming achievement. 2: 44-48, Jan. 1971.
- Bachman, A. M. The relationship between a seventh-grade pupil's academic self-concept and achievement in mathematics. 1: 173-79, May 1970.
- Becker, J. P. Research in mathematics education: The role of theory and of aptitude-treatment-interaction. 1: 19-28, Jan. 1970.
- Becker, J. P., & McKellar, M. T. Some considerations of the findings. 2: 135-42, Mar. 1971.
- Behr, M. J. Interactions between "structure-of-intellect" factors and two methods of presenting concepts of modular arithmetic—a summary paper. 1: 29-42, Jan. 1970.
- Bierden, J. E. Behavioral objectives and flexible grouping in seventh-grade mathematics. 1: 207-17, Nov. 1970.
- Brager, G. L. Teacher expectancy and mathematics achievement. 1: 88-94, Mar. 1970.
- Callahan, L. G., & Passi, S. L. The relationship between the ability to conserve length and conceptual tempo. 2: 36-43, Jan. 1971.
- Collis, K. F. A technique for studying concept formation in mathematics. 2: 12-22, Jan. 1971.
- Coppedge, F. L., & Hanna, G. S. Comparison of teacher-written and empirically derived distractors to multiple-choice test questions. 2: 299-303, Nov. 1971.
- Cooney, T. J. The relevance of the study to teacher-education programs. 2: 124-29, Mar. 1971.
- Coxford, A. F. Further interpretations of achievement and attitude results. 2: 106-10, Mar. 1971.
- Diedrich, R. C., & Glennon, V. J. The effects of studying decimal and nondecimal numeration systems on mathematical understanding, retention, and transfer. 1: 162-72, May 1970.
- Eisenberg, T. A., & Walbesser, H. H. Learning hierarchies—numerical considerations. 2: 244-56, Nov. 1971.
- Findley, W. G. The problem of perspective. 2: 104-06, Mar. 1971.
- Fletcher, H. J. An efficiency reanalysis of the results. 2: 143-56, Mar. 1971.
- Fletcher, H. J. A reply to Romberg, Montgomery, and Peaker. 2: 238-40, May 1971.
- Fujita, G. Y., & O'Reilly, J. P. A two-stage sequential strategy in the placement of students in an undergraduate mathematics curriculum. 1: 241-50, Nov. 1970.
- Hanna, G. S. Testing students' ability to do geometric proofs: A comparison of three objective item types. 2: 213-17, May 1971.
- Higgins, J. L. Attitude changes in a mathematics laboratory utilizing a mathematics-through-science approach. 1: 43-56, Jan. 1970.
- Huntington, J. R. Linear measurement in the primary grades: A comparison of Piaget's description of the child's spontaneous conceptual development and the SMSG sequence of instruction. 1: 219-32, Nov. 1970.
- Jerman, M. Some strategies for solving simple multiplication combinations. 1: 95-128, Mar. 1970.
- Johnson, D. C., ed. Call for research manuscripts, including general guidelines. 1: 61-62, Jan. 1970.
- JRME Editorial Board. Information for contributors to JOURNAL FOR RESEARCH IN MATHEMATICS EDUCATION. 1: 187-92, May 1970.
- Kieren, T. E. Manipulative activity in mathematics learning. 2: 228-34, May 1971.
- Kilpatrick, J. Some implications of the International Study of Achievement in Mathematics for mathematics educators. 2: 164-71, Mar. 1971.
- King, B. W. On scrambling instructional stimuli. 1: 233-40, Nov. 1970.
- Lamon, W. E. The complexities in the learning of mathematics. 2: 117-21, Mar. 1971.
- Lefkowitz, R. S. The First Nine Years—a study of the Advanced Placement Program in mathematics. 2: 23-35, Jan. 1971.
- Moody, W. B., Abell, R., & Bausell, R. B. The effect of activity-oriented instruction upon original learning, transfer, and retention. 2: 207-12, May 1971.
- Murray, F. B. Verbal and nonverbal assessment of the conservation of illusion-distorted length. 1: 9-18, Jan. 1970.
- Peaker, G. F. A rejoinder for IEA. 2: 157-63, Mar. 1971.
- Peters, D. L. Discovery learning in kindergarten mathematics. 1: 76-87, Mar. 1970.
- Postlethwaite, T. N. International Association for the Evaluation of Educational Achievement (IEA)—The mathematics study. 2: 69-103, Mar. 1971.
- Rector, R. E., & Henderson, K. B. The relative effectiveness of four strategies for teaching mathematical concepts. 1: 69-75, Mar. 1970.
- Reys, R. E., & Rea, R. E. The Comprehensive Mathematics Inventory: An experimental instrument for assessing the mathematical competencies of children entering school. 1: 180-86, May 1970.
- Robinson, W. B. The effects of two semesters of secondary school calculus on students' first and second quarter calculus grades at the University of Utah. 1: 57-60, Jan. 1970.
- Romberg, T. A. Publicity and educational research: A case study. 2: 132-35, Mar. 1971.
- Romberg, T. A., & Montgomery, M. Comments on Fletcher's efficiency ratio. 2: 235-37, May 1971.
- Scandura, J. M. On the value of status studies in education. 2: 115-17, Mar. 1971.
- Scandura, J. M. A theory of mathematical knowledge: Can rules account for creative behavior? 2: 183-96, May 1971.
- Shah, S. A. The relationship between "age of entry" and achievement of 13-year-olds. 2: 121-23, Mar. 1971.
- Shepler, J. I. Parts of a systems approach to the development of a unit in probability and statistics for the elementary school. 1: 197-205, Nov. 1970.
- Shumway, R. J. Negative instances and mathematical concept formation: A preliminary study. 2: 218-27, May 1971.
- Sowder, L. Performance on some discovery tasks, grades 4-7. 2: 5-11, Jan. 1971.
- Sparks, B. E., Brown, J. A., & Bassler, O. C. The feasibility of inducing number conservation through training on reversibility. 1: 134-43, May 1970.

- Steffe, L. P. Differential performance of first-grade children when solving arithmetic addition problems. 1: 144-61, May 1970.
- Steffe, L. P., & Johnson, D. C. Problem-solving performances of first-grade children. 2: 50-64, Jan. 1971.
- Sullivan, J. J. Comments on the tests for 13-year-olds. 2: 110-15, Mar. 1971.
- Suydam, M. N., & Weaver, J. F. Research on mathematics education (K-12) reported in 1970. 2: 257-98, Nov. 1971.
- Webb, D. The philosophical basis for the study. 2: 129-32, Mar. 1971.

## Title Index

- Affective factors in mathematics learning: Comments on a paper by Neale and a plan for research. L. R. Aiken, Jr. 1: 251-55, Nov. 1970.
- Attitude changes in a mathematics laboratory utilizing a mathematics-through-science approach. J. L. Higgins 1: 43-56, Jan. 1970.
- Behavioral objectives and flexible grouping in seventh-grade mathematics. J. E. Bierden. 1: 207-17, Nov. 1970.
- Call for research manuscripts, including general guidelines. D. C. Johnson, ed. 1: 61-62, Jan. 1970.
- Comments on Fletcher's efficiency ratio. T. A. Romberg & M. Montgomery. 2: 235-37, May 1971.
- Comments on the tests for 13-year-olds. J. J. Sullivan. 2: 110-15, Mar. 1971.
- Comparison of teacher-written and empirically derived distractors to multiple-choice test questions. F. L. Coppedge & G. S. Hanna. 2: 299-303, Nov. 1971.
- The complexities in the learning of mathematics. W. E. Lamon. 2: 117-21, Mar. 1971.
- The Comprehensive Mathematics Inventory: An experimental instrument for assessing the mathematical competencies of children entering school. R. E. Reys & R. E. Rea. 1: 180-86, May 1970.
- Differential performance of first-grade children when solving arithmetic addition problems. L. P. Steffe. 1: 144-61, May 1970.
- Discovery learning in kindergarten mathematics. D. L. Peters. 1: 76-87, Mar. 1970.
- Does a terminal mathematics course contribute to changes in attitudes toward mathematics? D. B. Aichele. 2: 197-205, May 1971.
- The effect of activity-oriented instruction upon original learning, transfer, and retention. W. B. Moody, R. Abell, & R. B. Bausell. 2: 207-12, May 1971.
- The effects of studying decimal and nondecimal numeration systems on mathematical understanding, retention, and transfer. R. C. Diedrich & V. J. Glennon. 1: 162-72, May 1970.
- The effects of two semesters of secondary school calculus on students' first and second quarter calculus grades at the University of Utah. W. B. Robinson. 1: 57-60, Jan. 1970.
- An efficiency reanalysis of the results. H. J. Fletcher. 2: 143-56, Mar. 1971.
- The feasibility of inducing number conservation through training on reversibility. B. E. Sparks, J. A. Brown, & O. C. Bassler. 1: 134-43, May 1970.
- The first nine years—a study of the Advanced Placement Program in mathematics. R. S. Lefkowitz. 2: 23-35, Jan. 1971.
- Further interpretations of achievement and attitude results. A. F. Coxford. 2: 106-10, Mar. 1971.
- Information for contributors to JOURNAL FOR RESEARCH IN MATHEMATICS EDUCATION. JRME Editorial Board. 1: 187-92, May 1970.
- Interactions between "structure-of-intellect" factors and two methods of presenting concepts of modular arithmetic—a summary paper. M. J. Behr. 1: 29-42, Jan. 1970.
- International Association for the Evaluation of Educational Achievement (IEA)—The mathematics study. T. N. Postlethwaite. 2: 69-103, Mar. 1971.
- Learning hierarchies—numerical considerations. T. A. Eisenberg & H. H. Walbesser. 2: 244-56, Nov. 1971.
- Linear measurement in the primary grades: A comparison of Piaget's description of the child's spontaneous conceptual development and the SMSG sequence of instruction. J. R. Huntington. 1: 219-32, Nov. 1970.

 Testing students' ability to do geometric proofs: A comparison of three objective item types. G. S. Hanna. 2: 213-17, May 1971.  
 A theory of mathematical knowledge: Can rules account for creative behavior? J. M. Scandura. 2: 183-96, May 1971.  
 A two-stage sequential strategy in the placement of students in an undergraduate mathematics curriculum. G. Y. Fujita & J. P. O'Reilly. 1: 241-50, Nov. 1970.  
 Verbal and nonverbal assessment of the conservation of illusion-distorted length. F. B. Murray. 1: 9-18, Jan. 1970.  
 Verbal factors and mathematics learning: A review of research. L. R. Aiken, Jr. 2: 304-13, Nov. 1971.

## Subject Index

### ACHIEVEMENT

- Affective factors in mathematics learning: Comments on a paper by Neale and a plan for research. 1: 251-55, Nov. 1970.  
 Comments on the tests for 13-year-olds. 2: 110-15, Mar. 1971.  
 The complexities in the learning of mathematics. 2: 117-21, Mar. 1971.  
 Differential performance of first-grade children when solving arithmetic addition problems. 1: 144-61, May 1970.  
 The effects of two semesters of secondary school calculus on students' first and second quarter grades at the University of Utah. 1: 57-60, Jan. 1970.  
 An efficiency reanalysis of the results. 2: 143-56, Mar. 1971.  
 Further interpretations of achievement and attitude results. 2: 106-10, Mar. 1971.  
 International Association for the Evaluation of Educational Achievement (IEA)—the mathematics study. 2: 69-103, Mar. 1971.  
 On the value of status studies in education. 2: 115-17, Mar. 1971.  
 A rejoinder from IEA. 2: 157-63, Mar. 1971.  
 The relationship between "age of entry" and achievement of 13-year-olds. 2: 121-23, Mar. 1971.  
 The relationship between a seventh-grade pupil's academic self-concept and achievement in mathematics. 1: 173-79, May 1970.  
 The relationship of grade placement to programming aptitude and FORTRAN programming achievement. 2: 44-48, Jan. 1971.  
 Some considerations of the findings. 2: 135-42, Mar. 1971.  
 Some implications of the International Study of Achievement in Mathematics for mathematics educators. 2: 164-71, Mar. 1971.  
 Teacher expectancy and mathematics achievement. 1: 88-94, Mar. 1970.

### ALGEBRA

- Comparison of teacher-written and empirically derived distractors to multiple-choice test questions. 2: 299-303, Nov. 1971.

### APTITUDE AND ABILITY

- Interactions between "structure-of-intellect" factors and two methods of presenting concepts of modular arithmetic—a summary paper. 1: 29-42, Jan. 1970.  
 Problem-solving performances of first-grade children. 2: 50-64, Jan. 1971.  
 The relationship between a seventh-grade pupil's academic self-concept and achievement in mathematics. 1: 173-79, May 1970.  
 The relationship of grade placement to programming aptitude and FORTRAN programming achievement. 2: 44-48, Jan. 1971.  
 Research in mathematics education: The role of theory and of aptitude-treatment-interaction. 1: 19-28, Jan. 1970.  
 Testing students' ability to do geometric proofs: A comparison of three objective item types. 2: 213-17, May 1971.  
 A two-stage sequential strategy in the placement of students in an undergraduate mathematics curriculum. 1: 241-50, Nov. 1970.  
 Verbal factors and mathematics learning: A review of research. 2: 304-13, Nov. 1971.

### ATTITUDE

- Affective factors in mathematics learning: Comments on a paper by Neale and a plan for research. 1: 251-55, Nov. 1970.  
 Attitude changes in a mathematics laboratory utilizing a mathematics-through-science approach. 1: 43-56, Jan. 1970.  
 Does a terminal mathematics course contribute to changes in attitudes toward mathematics? 2: 197-206, May 1971.  
 Further interpretations of achievement and attitude results. 2: 106-10, Mar. 1971.  
 The relationship between a seventh-grade pupil's academic self-concept and achievement in mathematics. 1: 173-79, May 1970.  
 Teacher expectancy and mathematics achievement. 1: 88-94, Mar. 1970.

### CALCULUS

- The effects of two semesters of secondary school calculus on students' first and second quarter calculus grades at the University of Utah. 1: 57-60, Jan. 1970.

### COLLEGE MATHEMATICS

- Does a terminal mathematics course contribute to changes in attitudes toward mathematics? 2: 197-206, May 1971.  
 The effects of two semesters of secondary school calculus on students' first and second quarter calculus grades at the University of Utah. 1: 57-60, Jan. 1970.  
 The first nine years—a study of the Advanced Placement Program in mathematics. 2: 23-35, Jan. 1971.  
 The relationship of grade placement to programming aptitude and FORTRAN programming achievement. 2: 44-48, Jan. 1971.

The relative effectiveness of four strategies for teaching mathematical concepts. 1: 69-75, Mar. 1970.  
A two-stage sequential strategy in the placement of students in an undergraduate mathematics curriculum. 1: 241-50, Nov. 1970.

#### COMPUTER-ORIENTED PROGRAMS

The relationship of grade placement to programming aptitude and FORTRAN programming achievement. 2: 44-48, Jan. 1971.  
Some strategies for solving simple multiplication combinations. 1: 95-128, Mar. 1970.

#### CONCEPT FORMATION

Negative instances and mathematical concept formation: A preliminary study. 2: 218-27, May 1971.  
The relative effectiveness of four strategies for teaching mathematical concepts. 1: 69-75, Mar. 1970.  
A technique for studying concept formation in mathematics. 2: 12-22, Jan. 1971.

#### CONSERVATION (CONCEPT)

Differential performance of first-grade children when solving arithmetic addition problems. 1: 144-61, May 1970.  
Discovery learning in kindergarten mathematics. 1: 76-87, Mar. 1970.  
The feasibility of inducing number conservation through training on reversibility. 1: 134-43, May 1970.  
Linear measurement in the primary grades: A comparison of Piaget's description of the child's spontaneous conceptual development and the SMSG sequence of instruction. 1: 219-32, Nov. 1970.  
Problem-solving performances of first-grade children. 2: 50-64, Jan. 1971.  
The relationship between the ability to conserve length and conceptual tempo. 2: 36-43, Jan. 1971.  
Verbal and nonverbal assessment of the conservation of illusion-distorted length. 1: 9-18, Jan. 1970.

#### CURRICULUM

Does a terminal mathematics course contribute to changes in attitudes toward mathematics? 2: 197-206, May 1971.  
Linear measurement in the primary grades: A comparison of Piaget's description of the child's spontaneous conceptual development and the SMSG sequence of instruction. 1: 219-32, Nov. 1970.  
Parts of a systems approach to the development of a unit in probability and statistics for the elementary school. 1: 197-205, Nov. 1970.  
A two-stage sequential strategy in the placement of students in an undergraduate mathematics curriculum. 1: 241-50, Nov. 1970.

#### ELEMENTARY SCHOOL MATHEMATICS

Differential performance of first-grade children when solving arithmetic addition problems. 1: 144-61, May 1970.  
Discovery learning in kindergarten mathematics. 1: 76-87, Mar. 1970.  
The effects of studying decimal and nondecimal numeration systems on mathematical understanding, retention, and transfer. 1: 162-72, May 1970.  
The feasibility of inducing number conservation through training on reversibility. 1: 134-43, May 1970.  
Linear measurement in the primary grades: A comparison of Piaget's description of the child's spontaneous conceptual development and the SMSG sequence of instruction. 1: 219-32, Nov. 1970.  
Parts of a systems approach to the development of a unit in probability and statistics for the elementary school. 1: 197-205, Nov. 1970.  
Performance on some discovery tasks, grades 4-7. 2: 5-11, Jan. 1971.  
Problem-solving performances of first-grade children. 2: 50-64, Jan. 1971.  
The relationship between the ability to conserve length and conceptual tempo. 2: 36-43, Jan. 1971.  
Research on mathematics education (K-12) reported in 1970. 2: 257-98, Nov. 1971.  
Some strategies for solving simple multiplication combinations. 1: 95-128, Mar. 1970.  
Teacher expectancy and mathematics achievement. 1: 88-94, Mar. 1970.  
Verbal and nonverbal assessment of the conservation of illusion-distorted length. 1: 9-18, Jan. 1970.

#### GEOMETRY

The Comprehensive Mathematics Inventory: An experimental instrument for assessing the mathematical competencies of children entering school. 1: 180-86, May 1970.  
Linear measurement in the primary grades: A comparison of Piaget's description of the child's spontaneous conceptual development and the SMSG sequence of instruction. 1: 219-32, Nov. 1970.  
The relationship between the ability to conserve length and conceptual tempo. 2: 36-43, Jan. 1971.  
Testing students' ability to do geometric proofs: A comparison of three objective item types. 2: 213-17, May 1971.  
Verbal and nonverbal assessment of the conservation of illusion-distorted length. 1: 9-18, Jan. 1970.

#### GROUPING

Behavioral objectives and flexible grouping in seventh-grade mathematics. 1: 207-17, Nov. 1970.

#### INSTRUCTION

Attitude changes in a mathematics laboratory utilizing a mathematics-through-science approach. 1: 43-56, Jan. 1970.  
Behavioral objectives and flexible grouping in seventh-grade mathematics. 1: 207-17, Nov. 1970.  
Discovery learning in kindergarten mathematics. 1: 76-87, Mar. 1970.  
Does a terminal mathematics course contribute to changes in attitudes toward mathematics? 2: 197-206, May 1971.  
The effect of activity-oriented instruction upon original learning, transfer, and retention. 2: 207-12, May 1971.  
The effects of studying decimal and nondecimal numeration systems on mathematical understanding, retention, and transfer. 1: 162-72, May 1970.  
The feasibility of inducing number conservation through training on reversibility. 1: 134-43, May 1970.  
Interactions between "structure-of-intellect" factors and two methods of presenting concepts of modular arithmetic—a summary paper. 1: 29-42, Jan. 1970.  
Manipulative activity in mathematics learning. 2: 228-33, May 1971.  
Negative instances and mathematical concept formation: A preliminary study. 2: 218-27, May 1971.  
On scrambling instructional stimuli. 1: 233-40, Nov. 1970.  
Performance on some discovery tasks, grades 4-7. 2: 5-11, Jan. 1971.  
The relative effectiveness of four strategies for teaching mathematical concepts. 1: 69-75, Mar. 1970.  
Research in mathematics education: The role of theory and of aptitude-treatment-interaction. 1: 19-28, Jan. 1970.

## INSTRUCTIONAL MATERIALS

- Attitude changes in a mathematics laboratory utilizing a mathematics-through-science approach. 1: 43-56, Jan. 1970.  
Linear measurement in the primary grades: A comparison of Piaget's description of the child's spontaneous conceptual development and the SMSG sequence of instruction. 1: 219-32, Nov. 1970.  
On scrambling instructional stimuli. 1: 233-40, Nov. 1970.  
Parts of a systems approach to the development of a unit in probability and statistics for the elementary school. 1: 197-205, Nov. 1970.  
Teacher expectancy and mathematics achievement. 1: 88-94, Mar. 1970.

## INTERACTION

- Interactions between "structure-of-intellect" factors and two methods of presenting concepts of modular arithmetic—a summary paper. 1: 29-42, Jan. 1970.  
Research in mathematics education: The role of theory and of aptitude-treatment-interaction. 1: 19-28, Jan. 1970.

## INTERNATIONAL STUDIES

- Comments on Fletcher's efficiency ratio. 2: 235-37, May 1971.  
Comments on the tests for 13-year-olds. 2: 110-15, Mar. 1971.  
The complexities in the learning of mathematics. 2: 117-21, Mar. 1971.  
An efficiency reanalysis of the results. 2: 143-56, Mar. 1971.  
Further interpretations of achievement and attitude results. 2: 106-10, Mar. 1971.  
International Association for the Evaluation of Educational Achievement (IEA)—The mathematics study. 2: 69-103, Mar. 1971.  
On the value of status studies in education. 2: 115-17, Mar. 1971.  
The philosophical basis for the study. 2: 129-32, Mar. 1971.  
The problem of perspective. 2: 104-06, Mar. 1971.  
Publicity and educational research: A case study. 2: 132-35, Mar. 1971.  
A rejoinder from IEA. 2: 157-63, Mar. 1971.  
The relationship between "age of entry" and achievement of 13-year-olds. 2: 121-23, Mar. 1971.  
The relevance of the study to teacher-education programs. 2: 124-29, Mar. 1971.  
A reply to Romberg, Montgomery, and Peaker. 2: 238-40, May 1971.  
Some considerations of the findings. 2: 135-42, Mar. 1971.  
Some implications of the International Study of Achievement in Mathematics for mathematics educators. 2: 164-71, Mar. 1971.

## LEARNING

- Affective factors in mathematics learning: Comments on a paper by Neale and a plan for research. 1: 251-55, Nov. 1970.  
The complexities in the learning of mathematics. 2: 117-21, Mar. 1971.  
Differential performance of first-grade children when solving arithmetic addition problems. 1: 144-61, May 1970.  
Discovery learning in kindergarten mathematics. 1: 76-87, Mar. 1970.  
The effect of activity-oriented instruction upon original learning, transfer, and retention. 2: 207-12, May 1971.  
Interactions between "structure-of-intellect" factors and two methods of presenting concepts of modular arithmetic—a summary paper. 1: 29-42, Jan. 1970.  
Learning hierarchies—numerical considerations. 2: 244-56, Nov. 1971.  
Linear measurement in the primary grades: A comparison of Piaget's description of the child's spontaneous conceptual development and the SMSG sequence of instruction. 1: 219-32, Nov. 1970.  
Manipulative activity in mathematics learning. 2: 228-33, May 1971.  
Negative instances and mathematical concept formation: A preliminary study. 2: 218-27, May 1971.  
On scrambling instructional stimuli. 1: 233-40, Nov. 1970.  
Performance on some discovery tasks, grades 4-7. 2: 5-11, Jan. 1971.  
Problem-solving performances of first-grade children. 2: 50-64, Jan. 1971.  
Research in mathematics education: The role of theory and of aptitude-treatment-interaction. 1: 19-28, Jan. 1970.  
Some strategies for solving simple multiplication combinations. 1: 95-128, Mar. 1970.  
A technique for studying concept formation in mathematics. 2: 12-22, Jan. 1971.  
A theory of mathematical knowledge: Can rules account for creative behavior? 2: 183-96, May 1971.  
Verbal factors and mathematics learning: A review of research. 2: 304-13, Nov. 1971.

## MANIPULATIVE MATERIALS

- Attitude changes in a mathematics laboratory utilizing a mathematics-through-science approach. 1: 43-56, Jan. 1970.  
The effect of activity-oriented instruction upon original learning, transfer, and retention. 2: 207-12, May 1971.  
Manipulative activity in mathematics learning. 2: 228-33, May 1971.

## NEEDED RESEARCH

- Affective factors in mathematics learning: Comments on a paper by Neale and a plan for research. 1: 251-55, Nov. 1970.  
Research in mathematics education: The role of theory and of aptitude-treatment-interaction. 1: 19-28, Jan. 1970.

## NUMBER CONCEPTS AND SYSTEMS

- Comparison of teacher-written and empirically derived distractors to multiple-choice test questions. 2: 299-303, Nov. 1971.  
The Comprehensive Mathematics Inventory: An experimental instrument for assessing the mathematical competencies of children entering school. 1: 180-86, May 1970.  
Differential performance of first-grade children when solving arithmetic addition problems. 1: 144-61, May 1970.  
Discovery learning in kindergarten mathematics. 1: 76-87, Mar. 1970.  
The effects of studying decimal and nondecimal numeration systems on mathematical understanding, retention, and transfer. 1: 162-72, May 1970.  
The feasibility of inducing number conservation through training on reversibility. 1: 134-43, May 1970.  
Interactions between "structure-of-intellect" factors and two methods of presenting concepts of modular arithmetic—a summary paper. 1: 29-42, Jan. 1970.  
Some strategies for solving simple multiplication combinations. 1: 95-128, Mar. 1970.

## OBJECTIVES

Behavioral objectives and flexible grouping in seventh-grade mathematics. 1: 207-17, Nov. 1970.  
Learning hierarchies—numerical considerations. 2: 244-56, Nov. 1971.  
Parts of a systems approach to the development of a unit in probability and statistics for the elementary school. 1: 197-205, Nov. 1970.

## PIAGETIAN RESEARCH

Differential performance of first-grade children when solving arithmetic addition problems. 1: 144-61, May 1970.  
Discovery learning in kindergarten mathematics. 1: 76-87, Mar. 1970.  
The feasibility of inducing number conservation through training on reversibility. 1: 134-43, May 1970.  
Performance on some discovery tasks, grades 4-7. 2: 5-11, Jan. 1971.  
Problem-solving performances of first-grade children. 2: 50-64, Jan. 1971.  
The relationship between the ability to conserve length and conceptual tempo. 2: 36-43, Jan. 1971.  
Verbal and nonverbal assessment of the conservation of illusion-distorted length. 1: 9-18, Jan. 1970.

## PLACEMENT

The first nine years—a study of the Advanced Placement Program in mathematics. 2: 23-35, Jan. 1971.  
The relationship of grade placement to programming aptitude and FORTRAN programming achievement. 2: 44-48, Jan. 1971.  
A two-stage sequential strategy in the placement of students in an undergraduate mathematics curriculum. 1: 241-50, Nov. 1970.

## PRESCHOOL MATHEMATICS

The Comprehensive Mathematics Inventory: An experimental instrument for assessing the mathematical competencies of children entering school. 1: 180-86, May 1970.

## PROBLEM SOLVING

Differential performance of first-grade children when solving arithmetic addition problems. 1: 144-61, May 1970.  
Problem-solving performances of first-grade children. 2: 50-64, Jan. 1971.  
A theory of mathematical knowledge: Can rules account for creative behavior? 2: 183-96, May 1971.

## PROGRAMMED INSTRUCTION

On scrambling instructional stimuli. 1: 233-40, Nov. 1970.  
The relative effectiveness of four strategies for teaching mathematical concepts. 1: 69-75, Mar. 1970.  
Teacher expectancy and mathematics achievement. 1: 88-94, Mar. 1970.

## PROOFS AND LOGIC

Testing students' ability to do geometric proofs: A comparison of three objective item types. 2: 213-17, May 1971.  
A theory of mathematical knowledge: Can rules account for creative behavior? 2: 183-96, May 1971.

## RESEARCH CRITIQUES

Affective factors in mathematics learning: Comments on a paper by Neale and a plan for research. 1: 251-55, Nov. 1970.  
Comments on Fletcher's efficiency ratio. 2: 235-37, May 1971.  
Comments on the tests for 13-year-olds. 2: 110-15, Mar. 1971.  
The complexities in the learning of mathematics. 2: 117-21, Mar. 1971.  
An efficiency reanalysis of the results. 2: 143-56, Mar. 1971.  
Further interpretations of achievement and attitude results. 2: 106-10, Mar. 1971.  
On the value of status studies in education. 2: 115-17, Mar. 1971.  
The philosophical basis for the study. 2: 129-32, Mar. 1971.  
The problem of perspective. 2: 104-06, Mar. 1971.  
Publicity and educational research: A case study. 2: 132-35, Mar. 1971.  
A rejoinder from IEA. 2: 157-63, Mar. 1971.  
The relationship between "age of entry" and achievement of 13-year-olds. 2: 121-23, Mar. 1971.  
The relevance of the study to teacher-education programs. 2: 124-29, Mar. 1971.  
A reply to Romberg, Montgomery, and Peaker. 2: 238-40, May 1971.  
Some considerations of the findings. 2: 135-42, Mar. 1971.  
Some implications of the International Study of Achievement in Mathematics for mathematics educators. 2: 164-71, Mar. 1971.

## RESEARCH METHODOLOGY

Affective factors in mathematics learning: Comments on a paper by Neale and a plan for research. 1: 251-55, Nov. 1970.  
Call for research manuscripts, including general guidelines. 1: 61-62, Jan. 1970.  
Comments on Fletcher's efficiency ratio. 2: 235-37, May 1971.  
An efficiency reanalysis of the results. 2: 143-56, Mar. 1971.  
Information for contributors to JOURNAL FOR RESEARCH IN MATHEMATICS EDUCATION. 1: 187-92, May 1970.  
Learning hierarchies—numerical considerations. 2: 244-56, Nov. 1971.  
A reply to Romberg, Montgomery, and Peaker. 2: 238-40, May 1971.  
Research in mathematics education: The role of theory and of aptitude-treatment-interaction. 1: 19-28, Jan. 1970.  
A technique for studying concept formation in mathematics. 2: 12-22, Jan. 1971.

## RESEARCH REVIEWS

International Association for the Evaluation of Educational Achievement (IEA)—the mathematics study. 2: 69-103, Mar. 1971.  
Manipulative activity in mathematics learning. 2: 228-33, May 1971.  
Research on mathematics education (K-12) reported in 1970. 2: 257-98, Nov. 1971.  
Verbal factors and mathematics learning: A review of research. 2: 304-13, Nov. 1971.

## RETENTION

The effect of activity-oriented instruction upon original learning, transfer, and retention. 2: 207-12, May 1971.  
The effects of studying decimal and nondecimal numeration systems on mathematical understanding, retention, and transfer. 1: 162-72, May 1970.

- Attitude changes in a mathematics laboratory utilizing a mathematics-through-science approach. 1: 43-56, Jan. 1970.
- Behavioral objectives and flexible grouping in seventh-grade mathematics. 1: 207-17, Nov. 1970.
- The effects of two semesters of secondary school calculus on students' first and second quarter calculus grades the University of Utah. 1: 57-60, Jan. 1970.
- The first nine years—a study of the Advanced Placement Program in mathematics. 2: 23-35, Jan. 1971.
- The relationship between a seventh-grade pupil's academic self-concept and achievement in mathematics. 1: 173-79, May 1970.
- The relationship of grade placement to programming aptitude and FORTRAN programming achievement. 2: 44-48, Jan. 1971.
- Research on mathematics education (K-12) reported in 1970. 2: 257-98, Nov. 1971.
- A technique for studying concept formation in mathematics. 2: 12-22, Jan. 1971.
- Testing students' ability to do geometric proofs: A comparison of three objective item types. 2: 213-17, May 1971.

#### SEQUENCING

- Learning hierarchies—numerical considerations. 2: 244-56, Nov. 1971.
- Linear measurement in the primary grades: A comparison of Piaget's description of the child's spontaneous conceptual development and the MSG sequence of instruction. 1: 219-32, Nov. 1970.
- On scrambling instructional stimuli. 1: 233-40, Nov. 1970.

#### TEACHERS

- Comparison of teacher-written and empirically derived distractors to multiple-choice test questions. 2: 299-303, Nov. 1971.
- The relevance of the study to teacher-education programs. 2: 124-29, Mar. 1971.
- Teacher expectancy and mathematics achievement. 1: 88-94, Mar. 1970.

#### TESTS

- Comparison of teacher-written and empirically derived distractors to multiple-choice tests questions. 2: 299-303, Nov. 1971.
- The Comprehensive Mathematics Inventory: An experimental instrument for assessing the mathematical competencies of children entering school. 1: 180-86, May 1970.
- Testing students' ability to do geometric proof: A comparison of three objective item types. 2: 213-17, May 1971.

#### TRANSFER OF TRAINING

- The effect of activity-oriented instruction upon original learning, Transfer, and Retention. 2: 207-12, May 1971.
- The effects of studying decimal and nondecimal numeration systems on mathematical understanding, retention, and transfer. 1: 162-72, May 1970.

## Call for Research Papers

[Continued from p. 303]

any one category will be determined after the selection procedure is completed. Approximately 20 papers will be selected for presentation.

### Procedures for Submitting Proposals for Papers

Those wishing to present a paper must submit six copies of a proposal—typewritten, double spaced, and not to exceed 1000 words. The proposal should contain the following information in order:

- A. The mailing address of the sender (in the upper right hand corner).
- B. The appropriate category for the paper (in the upper left hand corner).
- C. Name of the author(s) and institutional affiliation(s). It is assumed that the first listed author will make the presentation unless otherwise indicated.
- D. Title of the paper.
- E. A summary of the paper to be presented describing the purpose and significance of the research, the conceptual framework, the procedures, the analysis, the results, and the conclusions if appropriate.

With each proposal submitted, the sender should enclose two self-addressed postcards. One will be used to acknowledge receipt of the proposal and the other to notify the sender of the decision of the screening committee. Decisions upon each proposal will be made by February 12, 1972.

### Where to Submit Proposals

The proposal should be submitted as soon as possible, but in all cases before December 31, 1971, to:

Jon L. Higgins  
ERIC Information Analysis Center  
for Science and Mathematics Education  
1460 West Lane Avenue  
Columbus, Ohio 43210
