

## NCTM CAEP Standards (2012) Reviewer Rubrics – Middle Grades (Initial Preparation)

### Standard 1: Content Knowledge

**Standard 1:** Effective teachers of middle grades mathematics demonstrate and apply knowledge of major mathematics concepts, algorithms, procedures, connections, and applications within and among mathematical content domains.

**Program evidence of completers' attainment of Standard 1:**

- Assessments are aligned to mathematical domain competencies of *NCTM CAEP Mathematics Content for Middle Grades*.
- Assessments, rubrics, and data charts are aligned with standard elements.
- Alignment to standard element(s) is provided within assessment rubrics per criterion.
- Data charts are aligned with assessment rubric and report completer/candidate performance by the level (individually scored items) at which it is collected.
- Assessment rubrics contain discernible levels of performance.
- Assessments are required of all candidates.

**Decision Criteria:** Attainment of Standard 1 is based on four considerations:

- Two or three years (depending on number of current year program completers) of individual completer performance data (scores and subscores) on state-required mathematics content licensure tests aligned to mathematical domain competencies of *NCTM CAEP Mathematics Content for Middle Grades*.
- At least two additional assessments accompanied by completer/candidate performance data from a minimum of two applications for an initial report or a minimum of one application for a response to conditions or revised report and selected from:
  - o Grades in required mathematics or mathematics education courses aligned to elements of *NCTM CAEP Standards (2012)* and to mathematical domain competencies of *NCTM CAEP Mathematics Content for Middle Grades* and overall mathematics GPAs in required mathematics coursework accompanied by completer data.
    - Transcript analysis (required for completers where mathematics or equivalent coursework was not taken at program's institution) that includes course alignment to *NCTM CAEP Mathematics Content for Middle Grades*.
  - o Content-based assessment such as projects, course portfolio, or other course products aligned to mathematical domain competencies of *NCTM CAEP Mathematics Content for Middle Grades accompanied by candidate data*.
- Content-based assessments (state licensure test, course grades, projects, course portfolio, or other course products) collectively demonstrating at least an 80% alignment to each domain of *NCTM CAEP Mathematics Content for Middle Grades* and accompanied by completer/candidate performance data
- A preponderance of evidence drawn from the elements
  - o SASB policy defines preponderance of evidence as “an overall confirmation that candidates meet standards in the strength, weight, or quality of evidence,” rather than satisfactory performance for each element. A commonly accepted definition of preponderance of evidence is a requirement that more than 50% of the evidence favors a given outcome. NCTM program review decisions are based on the preponderance of evidence at the standard level using this definition. Specifically, more than 50% of the elements of each standard must be met at the acceptable or target level.
  - o Element 1a must be met at the acceptable or target level in order to satisfy the preponderance of evidence for Standard 1.

NCTM Element	Unacceptable	Acceptable	Target

----------------------------------	---	---	--

## Standard 2: Mathematical Practices

**Standard 2:** Effective teachers of middle grades mathematics solve problems, represent mathematical ideas, reason, prove, use mathematical models, attend to precision, identify elements of structure, generalize, engage in mathematical communication, and make connections as essential mathematical practices. They understand that these practices intersect with mathematical content and that understanding relies on the ability to demonstrate these practices within and among mathematical domains and in their teaching.

**Program evidence of candidates' attainment of Standard 2:**

- Assessments, rubrics, and data charts are aligned with standard elements.
- Alignment to standard element(s) is provided within assessment rubrics per criterion.
- Data charts are aligned with assessment rubric and report candidate performance by the level (individually scored items) at which it is collected.
- Assessment rubrics contain discernible levels of performance.
- Assessments are required of all candidates.

**Decision Criteria:** Attainment of Standard 2 is based on two considerations:

- At least two assessments aligned to elements of *NCTM CAEP Standards (2012)* and accompanied by candidate performance data from a minimum of two applications for an initial report or a minimum of one application for a response to conditions or revised report and selected from:
  - o Grades in required mathematics or mathematics education courses and overall mathematics GPAs for completers
    - Transcript analysis (required for candidates where mathematics or equivalent coursework was not taken at program's institution) that includes course data reported by individual completer
  - o Projects, course or student teaching/internship portfolio, or course products and accompanied by candidate performance data
- A preponderance of evidence drawn from the elements
  - o SASB policy defines preponderance of evidence as "an overall confirmation that candidates meet standards in the strength, weight, or quality of evidence," rather than satisfactory performance for each element. A commonly accepted definition of preponderance of evidence is a requirement that more than 50% of the evidence favors a given outcome. NCTM program review decisions are based on the preponderance of evidence at the standard level using this definition. Specifically, more than 50% of the elements of each standard must be met at the acceptable or target level.
  - o Elements 2a, 2b, and at least 2 additional elements must be met at the acceptable or target level in order to satisfy the preponderance of evidence for Standard 2.

problem solving, reasoning, communicating, connecting, and representing.	connecting, and representing.	connecting, and representing.	connecting, and representing.  - Reflect on how the mathematical practices of problem solving, reasoning, communicating, connecting, and representing impact mathematical understanding.
--	-------------------------------	-------------------------------	--

### Standard 3: Content Pedagogy

**Standard 3:** Effective teachers of middle grades mathematics apply knowledge of curriculum standards for mathematics and their relationship to student learning within and across mathematical domains. They incorporate research-based mathematical experiences and include multiple instructional strategies and mathematics-specific technological tools in their teaching to develop all students' mathematical understanding and proficiency. They provide students with opportunities to do mathematics – talking about it and connecting it to both theoretical and real-world contexts. They plan, select, implement, interpret, and use formative and summative assessments for monitoring student learning, measuring student mathematical understanding, and informing practice.

**Program evidence of candidates' attainment of Standard 3:**

- Assessments, rubrics, and data charts are aligned with standard elements.
- Alignment to standard element(s) is provided within assessment rubrics per criterion.
- Data charts are aligned with assessment rubric and report candidate performance by the level (individually scored items) at which it is collected.
- Assessment rubrics contain discernible levels of performance.
- Assessments are required of all candidates.

**Decision Criteria:** Attainment of Standard 3 is based on two considerations:

- At least two assessments aligned to elements of *NCTM CAEP Standards (2012)* and based on course products or student teaching/internship artifacts such as lesson and/or unit plan(s), student teaching/internship evaluation, or portfolio and accompanied by candidate performance data from a minimum of two applications for an initial report or a minimum of one application for a response to conditions or revised report
- A preponderance of evidence drawn from the elements
  - o SASB policy defines preponderance of evidence as “an overall confirmation that candidates meet standards in the strength, weight, or quality of evidence,” rather than satisfactory performance for each element. A commonly accepted definition of preponderance of evidence is a requirement that more than 50% of the evidence favors a given outcome. NCTM program review decisions are based on the preponderance of evidence at the standard level using this definition. Specifically, more than 50% of the elements of each standard must be met at the acceptable or target level.
  - o Elements 3a, 3c, and 3f and at least 1 additional element must be met at the acceptable or target level in order to satisfy the preponderance of evidence for Standard 3.

NCTM Element	Unacceptable	Acceptable	Target
Preservice teacher candidates:	Fewer than two assessments or assessments provide little or no evidence that middle grades candidates:	At least two assessments provide evidence that middle grades candidates:	At least two assessments provide evidence that middle grades candidates:

			knowledge and skills.
--	--	--	-----------------------

## Standard 4: Mathematical Learning Environment

**Standard 4:** Effective teachers of middle grades mathematics exhibit knowledge of pre-adolescent and adolescent learning, development, and behavior. They use this knowledge to plan and create sequential learning opportunities grounded in mathematics education research where students are actively engaged in the mathematics they are learning and building from prior knowledge and skills. They demonstrate a positive disposition toward mathematical practices and learning, include culturally relevant perspectives in teaching, and demonstrate equitable and ethical treatment of and high expectations for all students. They use instructional tools such as manipulatives, digital tools, and virtual resources to enhance learning while recognizing the possible limitations of such tools.

**Program evidence of candidates' attainment of Standard 4:**

- Assessments, rubrics, and data charts are aligned with standard elements.
- Alignment to standard element(s) is provided within assessment rubrics per criterion.
- Data charts are aligned with assessment rubric and report candidate performance by the level (individually scored items) at which it is collected.
- Assessment rubrics contain discernible levels of performance.
- Assessments are required of all candidates.

**Decision Criteria:** Attainment of Standard 4 is based on two considerations:

- At least two assessments aligned to elements of *NCTM CAEP Standards (2012)* and based on course products or student teaching/internship artifacts such as lesson and/or unit plan(s), student teaching/internship evaluation, or portfolio and accompanied by candidate performance data from a minimum of two applications for an initial report or a minimum of one application for a response to conditions or revised report
- A preponderance of evidence drawn from the elements
  - o SASB policy defines preponderance of evidence as “an overall confirmation that candidates meet standards in the strength, weight, or quality of evidence,” rather than satisfactory performance for each element. A commonly accepted definition of preponderance of evidence is a requirement that more than 50% of the evidence favors a given outcome. NCTM program review decisions are based on the preponderance of evidence at the standard level using this definition. Specifically, more than 50% of the elements of each standard must be met at the acceptable or target level.
  - o Elements 4b, 4d, and 4e must be met at the acceptable or target level in order to satisfy the preponderance of evidence for Standard 4.

NCTM Element	Unacceptable	Acceptable	Target

mathematical processes and learning.	learning.	learning.	learning. - Know how students construct knowledge, acquire skills, and develop disciplined thinking processes.
<b>Element 4b</b> Plan and create developmentally appropriate, sequential, and challenging learning opportunities grounded in mathematics education research in which students are actively engaged in building new knowledge from prior knowledge and experiences.	- Plan and create sequential learning opportunities in which students connect new learning to prior knowledge and experiences.  - Create a sequence of developmentally appropriate and challenging learning opportunities grounded in mathematics education research in which students are actively engaged in building new knowledge.	- Plan and create sequential learning opportunities in which students connect new learning to prior knowledge and experiences  - Create a sequence of developmentally appropriate and challenging learning opportunities grounded in mathematics education research in which students are actively engaged in building new knowledge.	- Plan and create sequential learning opportunities in which students connect new learning to prior knowledge and experiences  - Create a sequence of developmentally appropriate and challenging learning opportunities grounded in mathematics education research in which students are actively engaged in building new knowledge.  - Create a developmentally appropriate and challenging sequence of instruction for all students that shows a progression of learning over time toward proficiency and understanding.
<b>Element 4c</b> Incorporate knowledge of individual differences and the cultural and language diversity that exists within classrooms and include culturally relevant perspectives as a means to motivate and engage students.	- Incorporate knowledge of individual differences and the cultural and language diversity that exists within classrooms to motivate and engage students.  - Include culturally relevant perspectives as a means to motivate and engage students.	- Incorporate knowledge of individual differences and the cultural and language diversity that exists within classrooms to motivate and engage students.  - Include culturally relevant perspectives as a means to motivate and engage students.	- Incorporate knowledge of individual differences and the cultural and language diversity that exists within classrooms to motivate and engage students.  - Include culturally relevant perspectives as a means to motivate and engage students.  - Access information about and incorporate resources related to cultural, ethnic, linguistic, gender, and learning differences in their teaching.

<p><b>Element 4d</b></p> <p>Demonstrate equitable and ethical treatment of and high expectations for all students.</p>	<ul style="list-style-type: none"> <li>- Demonstrate equitable and ethical treatment of all students.</li> <li>- Have high expectations for all students.</li> </ul>	<ul style="list-style-type: none"> <li>- Demonstrate equitable and ethical treatment of all students.</li> <li>- Have high expectations for all students.</li> </ul>	<ul style="list-style-type: none"> <li>- Demonstrate equitable and ethical treatment of all students.</li> <li>- Have high expectations for all students and persist in helping each student reach his/her full potential.</li> <li>- Demonstrate respect for and responsiveness to the cultural backgrounds and differing perspectives students bring to the classroom.</li> </ul>
<p><b>Element 4e</b></p> <p>Apply mathematical content and pedagogical knowledge to select and use instructional tools such as manipulatives and physical models, drawings, virtual environments, spreadsheets, presentation tools, and mathematics-specific technologies (e.g., graphing tools and interactive geometry software); and make sound decisions about when such tools enhance teaching and learning, recognizing both the insights to be gained and possible limitations of such tools.</p>	<ul style="list-style-type: none"> <li>- Apply mathematical content and pedagogical knowledge to select and use instructional tools such as manipulatives and physical models, drawings, virtual environments, spreadsheets, presentation tools, and mathematics-specific technologies.</li> <li>- Make sound decisions about when instructional tools enhance teaching and learning and recognize both the insights to be gained and possible limitations of such tools.</li> </ul>	<ul style="list-style-type: none"> <li>- Apply mathematical content and pedagogical knowledge to select and use instructional tools such as manipulatives and physical models, drawings, virtual environments, spreadsheets, presentation tools, and mathematics-specific technologies.</li> <li>- Make sound decisions about when instructional tools enhance teaching and learning and recognize both the insights to be gained and possible limitations of such tools.</li> </ul>	<ul style="list-style-type: none"> <li>- Apply mathematical content and pedagogical knowledge to select and use instructional tools such as manipulatives and physical models, drawings, virtual environments, spreadsheets, presentation tools, and mathematics-specific technologies.</li> <li>- Make sound decisions about when instructional tools enhance teaching and learning and recognize both the insights to be gained and possible limitations of such tools.</li> <li>- Participate in learning opportunities that address current and emerging technologies in support of mathematics learning and teaching.</li> </ul>

**Standard 5: Impact on Student Learning**

**Standard 5:** Effective teachers of middle grades mathematics provide evidence demonstrating that as a result of their instruction, middle grades students’ conceptual understanding, procedural fluency, strategic competence, adaptive reasoning, and application of major mathematics concepts in varied contexts have increased. These teachers support the continual development of a positive disposition toward mathematics. They show that new student mathematical knowledge has been created as a consequence of their ability to engage students in mathematical experiences that are developmentally appropriate, require active engagement, and include mathematics-specific technology in building new knowledge.

**Program evidence of candidates’ attainment of Standard 5:**

- Assessments, rubrics, and data charts are aligned with standard elements.
- Alignment to standard element(s) is provided within assessment rubrics per criterion.
- Data charts are aligned with assessment rubric and report candidate performance by the level (individually scored items) at which it is collected.
- Assessment rubrics contain discernible levels of performance.
- Assessments are required of all candidates.

**Decision Criteria:** Attainment of Standard 5 is based on two considerations:

- At least two assessments aligned to elements of *NCTM CAEP Standards (2012)* and based on course products or student teaching/internship artifacts such as lesson and/or unit plan(s), student teaching/internship evaluation, or portfolio and accompanied by candidate performance data from a minimum of two applications for an initial report or a minimum of one application for a response to conditions or revised report
- A preponderance of evidence drawn from the elements
  - o SASB policy defines preponderance of evidence as “an overall confirmation that candidates meet standards in the strength, weight, or quality of evidence,” rather than satisfactory performance for each element. A commonly accepted definition of preponderance of evidence is a requirement that more than 50% of the evidence favors a given outcome. NCTM program review decisions are based on the preponderance of evidence at the standard level using this definition. Specifically, more than 50% of the elements of each standard must be met at the acceptable or target level.
  - o Element 5c and at least 1 additional element must be met at the acceptable or target level in order to satisfy the preponderance of evidence for Standard 5.

NCTM Element	Unacceptable	Acceptable	Target
Preservice teacher candidates:	Fewer than two assessments or assessments provide little or no evidence that middle grades candidates:	At least two assessments provide evidence that middle grades candidates:	At least two assessments provide evidence that middle grades candidates:

**Standard 6: Professional Knowledge and Skills**

**Standard 6:** Effective teachers of middle grades mathematics are lifelong learners and recognize that learning is often collaborative. They participate in professional development experiences specific to mathematics and mathematics education, draw upon mathematics education research to inform practice, continuously reflect on their practice, and utilize resources from professional mathematics organizations.

**Program evidence of candidates' attainment of Standard 6:**

- Assessments, rubrics, and data charts are aligned with standard elements.
- Alignment to standard element(s) is provided within assessment rubrics per criterion.
- Data charts are aligned with assessment rubric and report candidate performance by the level (individually scored items) at which it is collected.
- Assessment rubrics contain discernible levels of performance.
- Assessments are required of all candidates.

**Decision Criteria:** Attainment of Standard 6 is based on two considerations:

- At least two assessments aligned to elements of *NCTM CAEP Standards (2012)* and based on course products or student teaching/internship artifacts such as student teaching/internship evaluation or portfolio and accompanied by candidate performance data from a minimum of two applications for an initial report or a minimum of one application for a response to conditions or revised report
- A preponderance of evidence drawn from the elements
  - o SASB policy defines preponderance of evidence as “an overall confirmation that candidates meet standards in the strength, weight, or quality of evidence,” rather than satisfactory performance for each element. A commonly accepted definition of preponderance of evidence is a requirement that more than 50% of the evidence favors a given outcome. NCTM program review decisions are based on the preponderance of evidence at the standard level using this definition. Specifically, more than 50% of the elements of each standard must be met at the acceptable or target level.
  - o Element 6b and at least 1 additional element must be met at the acceptable or target level in order to satisfy the preponderance of evidence for Standard 6.

<b>NCTM Element</b>  Preservice teacher candidates:	<b>Unacceptable</b>  Fewer than two assessments or assessments provide little or no evidence that middle grades candidates:	<b>Acceptable</b>  At least two assessments provide evidence that middle grades candidates:	<b>Target</b>  At least two assessments provide evidence that middle grades candidates:
<b>Element 6a</b>  Take an active role in their professional growth by participating in professional development experiences that directly relate to the learning and	- Participate in professional development experiences that directly relate to the learning and teaching of mathematics.	- Participate in professional development experiences that directly relate to the learning and teaching of mathematics.	- Participate in professional development experiences that directly relate to the learning and teaching of mathematics.  - Incorporate into their teaching new learning acquired from professional

teaching of mathematics.			development experiences.
