National Council of Teachers of Mathematics

Message from the new president of the Council. XXV, May 1932, 300-302.
Thirteenth annual meeting of the National Council of Teachers of Mathematics. XXV, Oct. 1932, 347-362.
New president of the National Council of Teachers of Mathematics. XXV, May 1932, 298-299.

News Notes

XXV, Jan. 1932, 44-46; Feb., 65, 83; April, 235-237; Oct. 369-371; Dec. 489-491.
On the teaching of algebra. Grossman, Howard D. XXV, Feb. 1932, 109-110.
Practical application of mathematics to engineering problems. Cole, Harry. XXV, May 1932, 290-297.
Preliminary report of the committee on geometry. Beatley, Ralph. XXV, Nov. 1932. 427-428.
Preliminary report of the committee on individual differences. Schorling, Raleigh. XXV, Nov. 1932, 420-426.
Problem analysis in high school physics. Zeller, Karl A. XXV, Feb. 1932, 71-73.
Problem of individual differences in mathematics classes. Sykes, Mabel. XXV, Oct. 1932, 363-368.
Properties of squares and cubes of arithmetical numbers. Theobald, John A. XXV, Oct. 1932, 332-339.
Psychological explanation of failures in high school algebra. Judd, Charles H. XXV, April 1932, 185-192.
Rene Descartes. XXV, March 1932, 173-175.
Sir Christopher Wren. XXV, Oct. 1932, 368.
Study of certain mathematical abilities in high school physics. Carter, William Ray. XXV, Oct. 1932, 313-331; Nov. 388-419; Dec. 451-469.
Technique for introducing general number and algebraic representation of operation. Brechbill, Henry. XXV, Feb. 1932, 79-83.
Tentative program for the policy committee. Hassler, J. O. XXV, Nov. 1932, 432-433.
Three mathematical songs. Merrill, Helen A. XXV, Jan. 1932, 36-37.
Trigonometry in the high school. Bailey, H. W. XXV, March 1932, 303-308.
Understanding and mechanical performance in algebra. Breslich, E. R. XXV, Feb. 1932, 57-65.
What mathematics means to the world. Hedrick, E. R. XXV, May 1932, 249-263.
What modern school administration expects of high school teachers of mathematics. Jackson, Lambert L., XXV, Feb. 1932, 66-70.

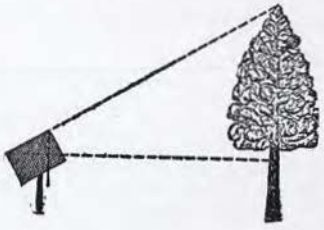
The Height of Trees

Finding the height of trees with a hypsometer takes the student into the great open spaces and makes mathematics a friend instead of a drudge. It spurs his imagination and the many problems that can be solved with a hypsometer will never be forgotten. Interest is the best developer of memory and intelligence.



The Lafayette Hypsometer was developed by Prof. Carl N. Shuster particularly for use in the teaching of Junior and Senior High mathematics.

Send for descriptive booklet for this and other simple instruments for school use.
