See Visual aids.

**General Mathematics**

**Curriculum**

The cultural course in mathematics for college students, 479.

General mathematics in the secondary school—Ⅰ, 73-80.

General mathematics in the secondary school—Ⅱ, 167-79.

**Geometry**

**Analytic**

Parabola, 400.

Pendulum patterns, 7.

The quadrature of the parabola: an ancient theorem in modern form, 36-37.

Theme paper and ruler finale, 411.

Theme paper, a ruler, and the central conics, 189-93.

Theme paper, a ruler, and the hyperbola, 29.

**Plane**

Company for Pythagoras, 411.

Euclidean constructions, 231-33.

A geometric approach to field-goal kicking, 463.

Models of loci, 546.

"More-than-similar" triangles, 561.

Out of the mouths of babes . . . ., 115.

The Pythagorean theorem—proof number one thousand, 346-47.

Quasi-right triangles, 116-18.

**Solid**

"Eureka," 105.

Parallelogram and parallelepiped, 266-67.

Spirals, 404.

**Teaching methods**

Direct vs. indirect memory in geometry, 13-15.

**Graphs and Graphing**

Constructing graphs with the slide rule, 8-10.

**Guidance**

Materials available for counseling in mathematics, 279-80.

The mathematics teachers' opportunities for guidance, 311-14.

National Science Foundation issues report on manpower resources in mathematics, 475.

Shall they take geometry? 557.

You will like geometry, 188.

**History of Mathematics**

Analysis: notes on the evolution of a subject and a name, 450.

Complex numbers: an example of recurring themes in the development of mathematics—Ⅰ, 106-14.

Complex numbers: an example of recurring themes in the development of mathematics—Ⅱ, 257.

Complex numbers: an example of recurring themes in the development of mathematics—Ⅲ, 340-45.

The Ganita-Sāra-Sangraha of Mahāvīra-cārya, 528.

Geometric progressions in America and Egypt, 37-40.

Historical extra credit, 488.

Historically speaking (Philip S. Jones, Editor), 36, 106, 194, 257, 340, 408, 482, 535.

"Large" roman numerals, 194.

Tangible arithmetic I: Napier's and Genaillé's rods, 482.

Tangible arithmetic II: the sector compasses, 535.

Tying mathematics to its history, 408.

**Integration of Subjects**

Kulgometrics: an experiment in the teaching of plane geometry, trigonometry, analytic geometry, differential calculus, and integral calculus to selected tenth-grade pupils in the high school, 204.

**Literature**

Have you read? (Philip Peak, Editor), 12, 70, 203, 248, 319, 433, 462, 481, 500, 551, 556.

Mathematical miscellanea (Paul C. Clifford and Adrian Struyk, Editors), 28, 115, 189, 265, 346, 411, 488, 561.

Research in Mathematics Education (Kenneth E. Brown, Editor), 51, 204.

Reviews and evaluations (Richard D. Crumley and Roderick McLennan, Editors), 418, 496, 559.

Reviews and evaluations (Cecil B. Read, Editor), 55, 126, 206, 277, 555.

**Logarithms**

Elementary calculation of logarithms, 115-16.

**Magazines, Mathematical**

Paradox, 519.

**Mathematics, General**

Beauty of Sonnet for the geometric mind, 189.

Mathematics as a creative art, 2-7.

**Minutes**

Minutes of the Annual Business Meeting, 434.

Minutes of Fifth Delegate Assembly, 438.

**News**

Affiliated Groups, 216, 279, 368, 553.

The NCTM and the NEA, 197.

Notes from the Washington office, 442, 552.

Periods of service of the officers of The National Council of Teachers of Mathematics, 22.

Revised edition of the guidance pamphlet, 441.

Who does the work?—NCTM committee structure, 550.
The yearbook planning committee, 505.

General
Common goals of mathematics teachers and
of the National Council, 281–82.
Points and viewpoints, 41, 119, 197, 281,
371, 432, 505, 550–51.

Numbers and number systems
Imaginaries, 11–12.
A note on the sequence of odd integers, 489.
On numbers which terminate perfect squares, 348–49.
Pythagorean numbers, 16–21.
Vector representation of multiplication and
division of complex numbers, 320–22, 382.

Plays
A mathematics assembly program, 476.

Probability
Probability, gambling, and game strategy,
271.
Probability theory of a simple card game,

Psychology
The role of insight in the learning of mathematics, 386.

Recreational mathematics
Cross-figure puzzle, 30–31.
Old wine in new bottles, 414.

Slide rule
A comparative study of the effectiveness of
lessons on the slide rule presented via
 television and in person, 323–27.
Constructing graphs with the slide rule,
8–10.
The slide rule, 493.
A slide rule for addition and subtraction of
numbers having the base 12, 339.

Teacher education
A new responsibility of teacher education
programs, 66–70.
The revision of certification requirements
for secondary mathematics teachers in
Oklahoma, 467.

Teaching methods
General
Aids to teaching. (Henry W. Syer and
Donovan A. Johnson, Editors), 93, 268,
328.
A comparative study of the effectiveness of
lessons on the slide rule presented via
 television and in person, 323–27.
Have you read? (Philip Peak, Editor), 12,
References for mathematics teachers, 43,
121, 199, 271, 350, 415, 493, 543.
Tips for beginners (Francis G. Lankford,
Editor), 46, 208, 362, 425.
What is going on in your school? (John A.
Brown and Houston T. Kernes, Editors),
Which way mathematics? 371.

High school
Elementary and secondary school training
A geometry project at Thornton Township
High School, 491.
Handling reviews, 362–63.
The high school mathematics library—I,
121.
The high-school mathematics library—II,
199.
How I teach analysis of verbal problems,
275–76.
How I teach understanding of definition,
274–75.
Improving the learning of mathematics,
393.
Issues in elementary and secondary school
mathematics, 290–94.
The status of mathematics in my school,
48–49.
The teaching of mathematics in Italian
schools, 162–66.

Junior high
The arithmetic of growth, 180–83.
A note on writing fractions, 527.
Teaching arithmetic in the junior high
school, 520.

Vectors
Vector representation of multiplication and
division of complex numbers, 320–22,
382.

Visual aids
The angle mirror—a teaching device for
plane geometry, 71–72.
Blackboard compasses that every student
can afford, 185–96.
Devices for a mathematics classroom
(Emil J. Berger, Editor), 32, 100, 184,
An individual laboratory kit for the mathemat­
cs student, 100–101.
Mathematics bulletin board displays, 91–
92.
The mathematical house, 254–56, 278.
A model for explaining how latitude may be
determined by making observations on
Polaris, 405.
A model for giving meaning to superposi­
tion in solid geometry, 33–35.
A model for teaching infinite series to high­
school students, 101–105.
Models of loci, 546.
Semi-permanent chalk for teaching, 407.
A simple device for demonstrating addition
and subtraction in the binary number
system, 499.
A simple multiple purpose dynamic device,
184–85.
A simple quadrant compasses, 498.
A tetrahedron with planes bisecting three
dihedral angles, 186–88.
Using a carpenter's folding rule to teach the
meaning of perimeter, 32.

Vocational mathematics. See also Guidance
National Science Foundation issues report
on manpower resources in mathematics,
475.
