Professional Standards for Teaching Mathematics

Related to Discourse

Standard 2: The Teacher’s Role in Discourse
The teacher of mathematics should orchestrate discourse by—

• posing questions and tasks that elicit, engage, and challenge each student’s thinking;
• listening carefully to students’ ideas;
• asking students to clarify and justify their ideas orally and in writing;
• deciding what to pursue in depth from among the ideas that students bring up during a discussion;
• deciding when and how to attach mathematical notation and language to students’ ideas;
• deciding when to provide information, when to clarify an issue, when to model, when to lead, and when to let a student struggle with a difficulty;
• motivating students’ participation in discussions and deciding when and how to encourage each student to participate.

Standard 3: Students’ Role in Discourse
The teacher of mathematics should promote classroom discourse in which students—

• listen to, respond to, and question the teacher and one another;
• use a variety of tools to reason, make connections, solve problems, and communicate;
• initiate problems and questions;
• make conjectures and present solutions;
• explore examples and counterexamples to investigate a conjecture;
• try to convince themselves and one another of the validity of particular representations, solutions, conjectures, and answers;
• rely on mathematical evidence and argument to determine validity.

Standard 4: Tools for Enhancing Discourse
The teacher of mathematics, in order to enhance discourse, should encourage and accept the use of—

• computers, calculators, and other technology;
• concrete materials used as models;
• pictures, diagrams, tables, and graphs;
• invented and conventional terms and symbols;
• metaphors, analogies, and stories;
• written hypotheses, explanations, and arguments;
• oral presentations and dramatizations.
