

## Problem-Solving Processes

	Computations	Measurement
<b>Standard</b>	Multiply: $\frac{2}{3} \times \frac{3}{5}$	Find the area of a rectangle that measures 4 cm by 6 cm.
<b>Reversibility</b>	Find two fractions whose product is $\frac{2}{3}$ .	Find a rectangle that has an area of 24 sq. cm.
<b>Generalization</b>	<p>Find two fractions whose product is greater than 1.</p> <p>Find two fractions whose product is less than 1.</p> <p>Find two fractions whose product is equal to 1.</p>	How is the area of a rectangle related to the area of a parallelogram? Explain using specific examples.
<b>Flexibility</b>	<p>Find the product:</p> $2\frac{2}{3} \times \frac{1}{2}$ <p>Find the product a different way.</p>	Find the area of a trapezoid using at least two different methods.
